

# Rocket Seagull LegaSuite

## New business capabilities with less time, risk & cost

*Modernize applications to maximize value*

Build new web and mobile applications out of existing application components

Enable web services integration between legacy and SOA-ready applications

Create web dashboards and reports to replace spooled files and batch reports

Automate manual application processes and improve people-to-systems integration

Translate applications from one locale or language to others

Ensure ongoing solution quality and integrity with automated testing

### the application modernization experts.

We believe that modernizing and re-using your existing applications is the fastest, most affordable, and lowest risk way to enable new business capabilities. Rocket Seagull® LegaSuite is our suite of modernization tools that empowers you to modernize mission-critical mainframe, midrange, UNIX, and Windows applications. With LegaSuite, you can improve business performance and increase the value and ROI you get from the applications that already support your organization.

Modernization takes more than just tools—it takes expertise. Rocket Seagull's Professional Services team has experience with hundreds of customer projects and has developed a modernization practice that addresses usability and human factors as well as the technical aspects of application modernization. From contact center to e-commerce, we can help you design fit-for-purpose solutions that reuse the applications you already own.

### create modern application experiences users want.

LegaSuite GUI focuses on improving application user experiences, making your green-screen applications look and behave as new web and mobile applications. Change appearance and behavior, update application workflow, and integrate with other desktop, web, and mobile applications to create an attractive, functional user experience.

### integrate non-SOA applications with SOA applications.

LegaSuite Integration focuses on integrating your mission-critical applications with your web site, partner portals, business process management, customer relationship management, and other applications that need access to back office functions. Use web services to integrate. Orchestrate multiple services and systems. Save time and money by not recreating business logic in another language.

### replace spooled files and batch reports with dashboards and web reports.

LegaSuite Insight focuses on modernizing reporting and business intelligence. Our software provides you with web-based dashboards and drill-down reports to go with your modernized LegaSuite GUI user experiences. Instantly save report data locally in multiple formats, including PDF, Word, and Excel. Empower your users with the ability to understand their data.

### automate business processes and workflows.

LegaSuite Workflow focuses on process automation for LegaSuite solutions. LegaSuite GUI enables you to work with your applications anytime, anywhere. Now you can take that modernization a step further, automating workflow across multiple applications and roles, creating unified user experiences for complex processes, and ensuring process compliance.

## make your single-lingual applications multi-lingual.

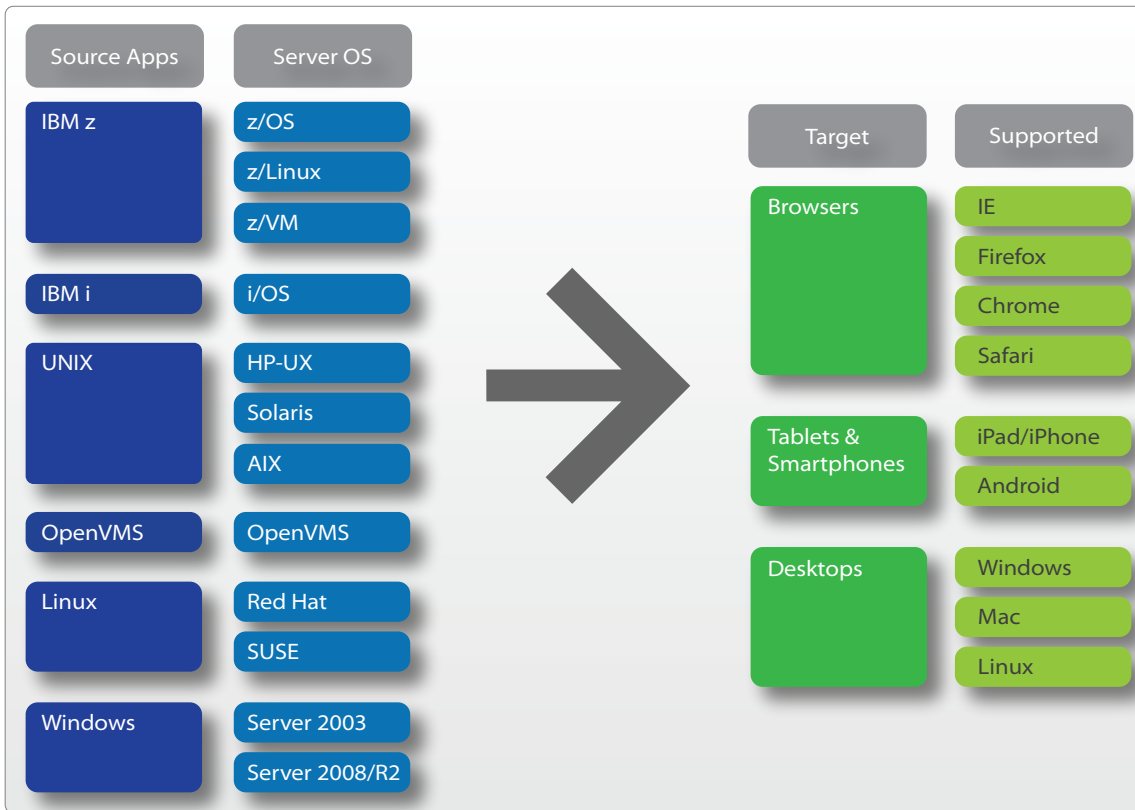

LegaSuite Text Translation Tool focuses on translating the language in which your application texts, labels, and messages display into localized text in another language. Any application can be translated into multiple languages when TTT is used with LegaSuite GUI. TTT can also translate some application types at the application source code level.

## maintain quality throughout the application lifecycle with automated testing.

LegaSuite Test Suite focuses on automated testing for your LegaSuite applications. Any application running on a Windows desktop can be tested. You can build, schedule, and execute full test plans and track the results. The focus is on automating quality and consistency where it matters most—where your users touch your modernized applications.

## application modernization. we do it all.

LegaSuite provides modernization capabilities for a wide variety of business computing platforms. Your mission-critical applications become accessible to users with the devices and software they like to use—browsers, mobile devices, and tablets. Application reuse is fast, safe, and effective. You deliver new business capabilities in rapid, well-defined increments at very reasonable costs.
